Vixinity i8-Q

Access Made Simple

Reliable access control for modern buildings with centralized cloud management and remote administration

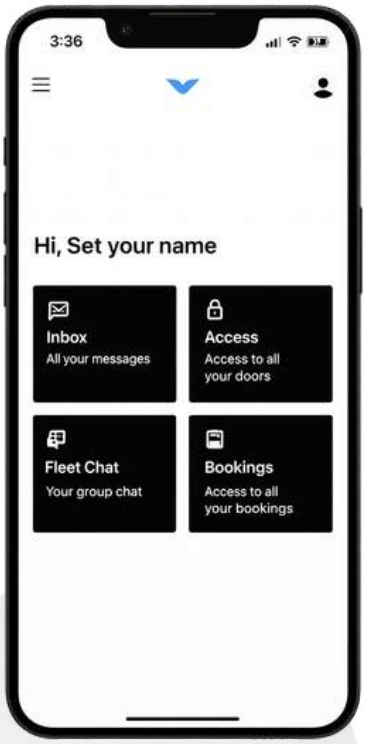

Complete Access Control Ecosystem

ON THE WALL

IN THE HAND

Open on Swipe:
Touch based interaction for intuitive control

Virtual Key:
Mobile Credentials reduce physical key management

QR Access :
Secure QR access, digital or printed entry

A Smart Video Access Terminal for Modern Buildings

Access, Solved

The VIXINITY i8-Q wall-mounted unit replaces traditional intercom systems with a modern, connected access solution. Its compact 8" surface-mounted design integrates seamlessly into doors, gates, and shared entry points while delivering secure, high-performance communication.

Engineered for durability and reliability, it is built to perform in demanding environments across residential, student housing, commercial, and gated communities.

Technical Specification:

- 8" Touch Display
- Integrated HD Camera
- PoE-Powered Single Cable Installation
- Elevator Control
- IP65
- PoE
- Built-in Speaker and Microphone
- QR Reader
- Operating Temperature
  - -15 C + 55 C
  - 5 F – 131 F

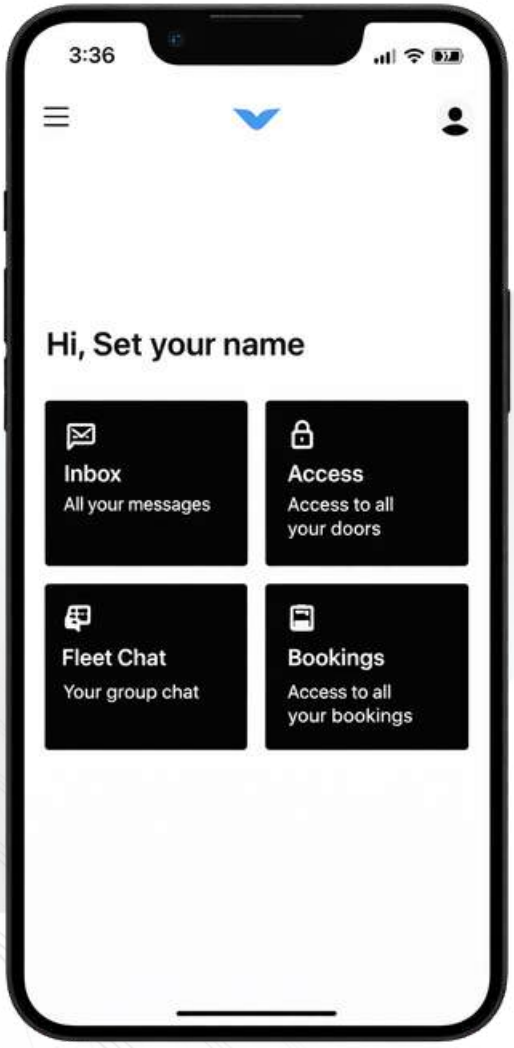

VIXINITY i8-Q
Complete Door Station

Mobile Access

Anytime, Anywhere

An intuitive interface that gives users all the functionality they need in a form they already understand

Tenant Mobile Application

Key Feature:

- Swipe-to-open door access
- Secure virtual access
- HD video calling with visitors
- Real-time door access logs and activity history
- Remote unlock for doors and gates
- Elevator control
- Temporary and permanent access sharing
- Secure, cloud-based synchronization
- QR Access
- Available on iOS and Android

Intelligent Access Infrastructure

The system supports flexible communication options – visitors can initiate HD video calls directly to the mobile app, place regular calls to any phone number, or connect to an in-apartment answering unit via a 10-inch indoor wall-mounted tablet.

Installation is streamlined with single-cable PoE connectivity for power and data. The unit includes a built-in secure card reader, and the latest model **Vixinity i8-Q** also integrates a QR code reader for fast, touchless access.

All devices are centrally managed through an intuitive cloud-based administration platform, enabling simple configuration, user management, and remote updates.

Available for

- Property developers
- System integrators
- Commercial building operators
- Facility management companies
- Security distributors
- Critical Infrastructure

User Interaction:

- Visitor arrives at the building entrance and selects the resident via the touchscreen directory.
- The system verifies the visitor through one of the following secure methods:
  - Live HD video call
  - Secure PIN entry on the touchscreen
  - Shared access by the tenant or property management
  - Secure QR access – digital or printed entry
  - RFID key based access
- Once verification is approved, the system grants authorization.
- The door unlocks securely for the approved visitor.
- Flexible, controlled access – designed for residents, guests, and temporary visitors.

Flexible Access Credentials

Card/RFID Transponders:
Secure contactless access using MIFARE DESFire technology, available as card or key fob—battery-free, maintenance-free, and environmentally sustainable.

Code-Based Access :
Secure numeric entry via the touchscreen.

Video Call: description
Real-time HD video communication for secure and convenient visitor verification.

Mobile Access App
Manage access, receive calls, and unlock doors remotely from your smartphone.

QR Code
Fast, touchless entry using secure, time-based QR codes.

Emaill Access
Grant temporary or permanent access via secure email invitations.

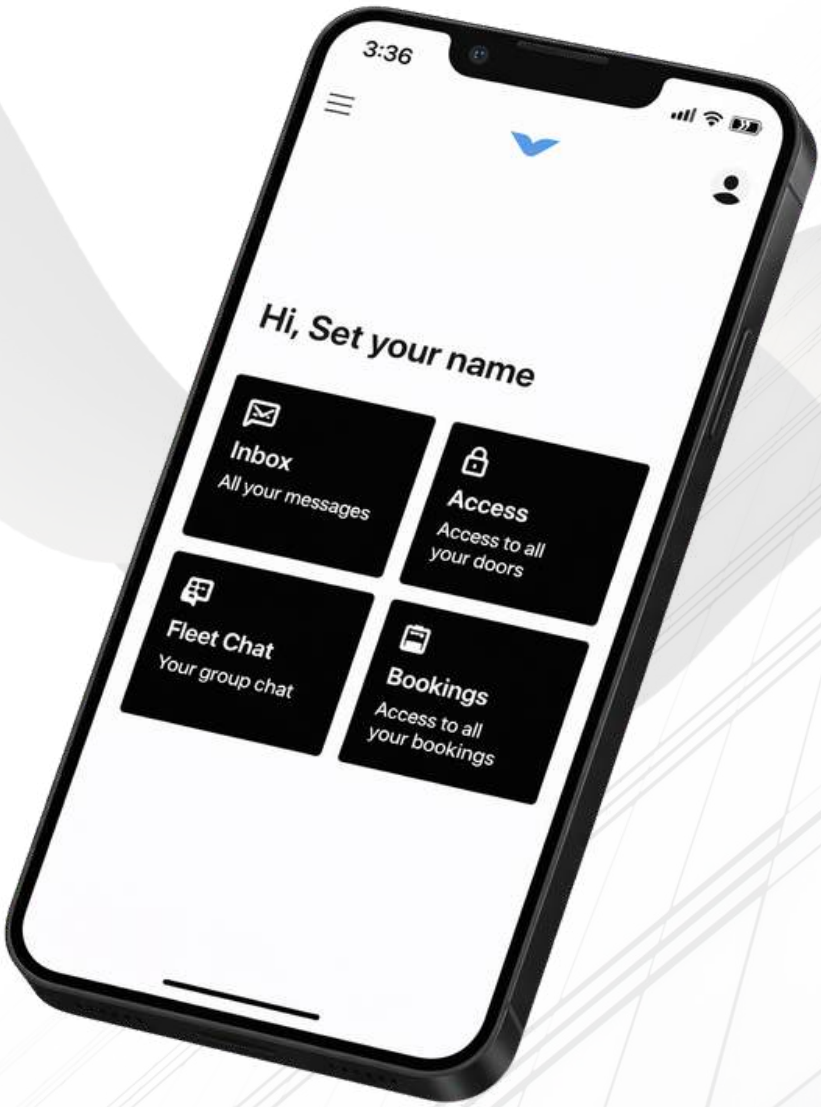

Full Control From Anywhere

Managed via a secure web-based interface requiring no complex infrastructure.

Cloud-Based Management :

Manage real-estate structure
Manage tenant access
Manage amenities and booking
Manage customer support ticket and cases
View complete event logs and alarms

Why Choose VIXINITY i8-Q?

Experience:
Large premium 8" display improves user experience.

Security:
HD + IR camera and encrypted credential technology.

Simplicity:
PoE simplifies infrastructure and reduces cabling costs.

Control:
Integrated elevator control adds vertical security.

Future-Ready:
Mobile access capability aligns with enterprise scalability.
